***Pre- and Post-Development Differences to Wetlands (Percent)***

Wetland Area	Rainfall Peak Flow (Percent)			Rainfall Volume (Percent)		
	1-Year	10-Year	100-Year	1-Year	10-Year	100-Year
Wetlands A	-55.8%	-53.5%	-27.5%	-3.9%	28.7%	34.7%
Wetlands B	0.0%	0.0%	0.0%	0.0%	0.0%	0.0%
Wetlands C Non-Jurisdictional	39.4%	5.4%	-2.7%	-11.1%	-22.5%	-25.9%
Wetlands D	20.4%	6.0%	2.3%	14.4%	5.4%	2.6%
Wetlands E	-86.2%	12.3%	43.6%	-21.7%	62.4%	68.2%
Wetlands F Non-Jurisdictional	-100.0%	-100.0%	-100.0%	-100.0%	-100.0%	-100.0%

**Summary of Changes**

Wetland Area A: The drainage area discharging to this area has increased 9.8 acres causing the stormwater quantity to increase, however peak flowrates have decreased . Stormwater Ponds C and E discharge into Area A, detention provided by the ponds causes the flowrate decrease.

Wetland Area B: The drainage area for Area B is located off-site and outside the limits of disturbance, there is no change in flows entering this wetland area.

Wetland Area C: This area is a non-regulated, non-jurisdictional wetland area. The drainage area discharging to Area C has decreased 4.65 acres, causing the stormwater quantity to decrease as well. Flowrates have increased slightly due to conversion of permeable surfaces to impermeable surfaces.

Wetland Area D: The drainage area discharging to Area D has decreased 0.25 acres, flowrates and stormwater quantities have decreased accordingly.

Wetland Area E: The drainage area discharging to Area E has increased 7.47 acres, flowrates have decreased accordingly. Pond D discharges into this area.

Wetland Area F: This area is a non-regulated, non-jurisdictional wetland area. The drainage area discharging to this area has been redirected to Wetland Area E through the proposed stormwater control system.
